Recall Project Definition

- s , initial vertex
- k , given positive number
- $l(e)$, length for each edge
- n , number of vertices(nodes)

Given a multigraph $G = (V, E)$ initial vertex $s \in V$ length $l(e) \in \mathbb{N}$ for each $e \in E$ the *minimum k -Chinese postman problem* is to find k tours such that each edge of the graph has been traversed at least once and the most expensive tour is minimized.
